

## Disagmaster™ Chip Removal Line

The intensified use of glues, resistance agents (RU), and resins in paper results in chips that are increasingly difficult to disaggregate.

The **Disagmaster** Line is an effective chip removal program, which:

- Preserves the fiber
- Increases productivity in dough preparation
- Reduces costs and energy consumption

The **Disagmaster** Line substantially shortens the pulper beating time, saving energy, as well as allowing increased use of recyclable materials and trimming in the manufacturing recipe.

Relying on a multidisciplinary team with a comprehensive vision, Mark has versatility to develop innovative and viable solutions that respect the particularities and objectives of each process.

Skilled at diagnosing, implementing and monitoring solutions, Mark translates into results and suggestions for improvement each information collected in the process, demonstrating the benefits and strengthening the relationship of trust with the customer.

Contact our representative to find out about Mark's solutions for chip removal.
