

Protect™ Line for Garment Conditioning

During forming, draining and pressing, the paper sheet undergoes strong water removal, which, when passing through the clothing, leaves residues that impregnate the canvas and felts.

The Protect™ Line is specific for the chemical conditioning of garments, promoting the passivation or dispersion of these residues, through continuous or intermittent application (shock), keeping the garments in adequate operational conditions, promoting:

- Improved process stability and efficiency
- Increased quality of the sheet produced by substantially reducing soiling and speckling
- Reduction in the frequency and time of interruptions to clean clothing and other parts of the process
- Increased productivity

Continuous treatment with the Protect™ Line extends the life of the clothing and offers significant gains in operability and overall paper machine efficiency.

Counting on a multi-disciplinary team

and comprehensive vision, Mark has versatility to develop innovative and viable solutions that respect the particularities and objectives of each process.

Skilled at diagnosing, implementing and monitoring solutions, Mark translates into results and suggestions for improvement each information collected in the process, demonstrating the benefits and strengthening the relationship of trust with the customer.
