

## Protect™ Line for Warehouse Control *Pitch and Stickies*

Pulp and paper manufacturing processes are susceptible to deposits formed by resins from wood, recycled material and microbiological contamination, causing serious problems, such as:

- Clogging of equipment, screens and felts
- Spots on finished products
- Reduced productivity of processes
- Decline in quality of the final product

Mark, through the **Protect™** Line, makes programs available for the dispersion, passivation, and fixation of these impurities, resulting in the control of deposits, eliminating undesirable consequences in the process and in the final product.

The **Protect™** Line of Pitch Control and Stickies, coupled with the **Cleanmaster™** Line of programmed Boilouts, offers significant gains in overall paper machine runnability and efficiency.

With a multi-disciplinary and far-sighted team, Mark

has the versatility to develop innovative and viable solutions that respect the particularities and objectives of each process.

Skilled at diagnosing, implementing and monitoring solutions, Mark translates into results and suggestions for improvement each information collected in the process, demonstrating the benefits and strengthening the relationship of trust with the customer.

Contact our representative and get to know Mark's product line for warehouse control.
