

BioBump™ Line for Microbiological Control

The pulp and paper manufacturing processes are naturally a favorable environment for the development of microorganisms, and its control is essential to avoid:

- microbiological slime
- asset degradation
- microbiologically-induced corrosion
- unpleasant odors and gases
- contamination, painting, and other impacts on the final product.

Mark is an expert in Microbiological Control, offering a wide range of biocides, tailored to the specific needs of each customer, promoting greater productivity by reducing the number of paper breaks and stops for cleaning, resulting in high effectiveness and excellent cost-benefit ratio.

Relying on a multidisciplinary team with a comprehensive vision, Mark has the versatility to develop innovative solutions and

that respect the particularities and objectives of each process.

Skilled at diagnosing, implementing and monitoring solutions, Mark translates into results and suggestions for improvement each information collected in the process, demonstrating the benefits and strengthening the relationship of trust with the customer.

Contact our representative and get to know our solutions for microbiological control.
