

## Topping™ Line Waterproofing Barriers

The growing concern with sustainability has led to numerous developments in the paper industry, for example the replacement of plastic film as a waterproofing barrier.

In this trend, Mark has developed the **Topping™** Line, with technology that promotes uniform paper coating to provide the necessary barrier to water, vapors, or oil.

Meeting different demands, the **Topping™** Line is composed of products formulated from synthetic, vegetable, and mineral raw materials, following the sustainable trend.

Relying on a new polymerization concept, associated with high performance additives, the **Topping™** Line allows the desired level of waterproofing to be obtained, according to the end use of the paper.

Versatile, the **Topping™** Line waterproofing resins can be sized for use in both on and off-line application systems, providing high operational performance and an excellent cost per ton produced ratio.

Relying on a multi-disciplinary team and comprehensive vision, Mark has versatility to develop innovative and viable solutions that respect the particularities and objectives of each process.

Skilled at diagnosing, implementing and monitoring solutions, Mark translates into results and suggestions for improvement each information collected in the process, demonstrating the benefits and strengthening the relationship of trust with the customer.
